

Jonalou Tarroza

**Individual Final Project
Create a Database System**

Parenthetical Method:

EMPLOYEE(EmployeeID, EmployeeFN, EmployeeLN, *PositionID*, *WarehouseID*, Email, Phone, CellPhone, Address, City, State, Zip, SSN, DOB, HireDate, TermDate, Salary, HourlyRate, ReviewDate, Notes)

POSITION(PositionID, Title)

WAREHOUSE(WarehouseID, WarehouseName, Address, City, State, Zip, Phone, ClimateControl, SecurityGate)

DRIVER(DriverID, DriverFN, DriverLN, Address, City, State, Zip, SSN, DOB, HireDate, TermDate, Email, Phone, Rating, MilesDriven, TotalEarnings)

STORAGEUNITS(UnitID, *WarehouseID*, UnitSize, Rent, UnitStatus)

CUSTOMER(CustomerID, CustomerFN, CustomerLN, Address, City, State, Zip, Email, Phone)

CUSTOMERREQUEST(RequestID, *CustomerID*, RequestDate, RequestedService, AdditionalInfo)

JOBDETAIL(JobDetailID, *JobOrderID*, *DriverID*, *VehicleID*, Mileage, Weight)

JOBORDER(JobOrderID, *CustomerID*, *VehicleID*, *DriverID*, MoveDate, *WarehouseID*, *StatusID*, AddressFr, CityFr, StateFr, AddressTo, CityTo, StateTo, ServiceNeeded, HeavyItems, StoreItem)

JOBSTATUS(StatusID, StatusName)

VEHICLE(VehicleID, *VehicleTypeID*)

VEHICLETYPE(VehicleTypeID, LicensePlate, Axles, Color, Stored)

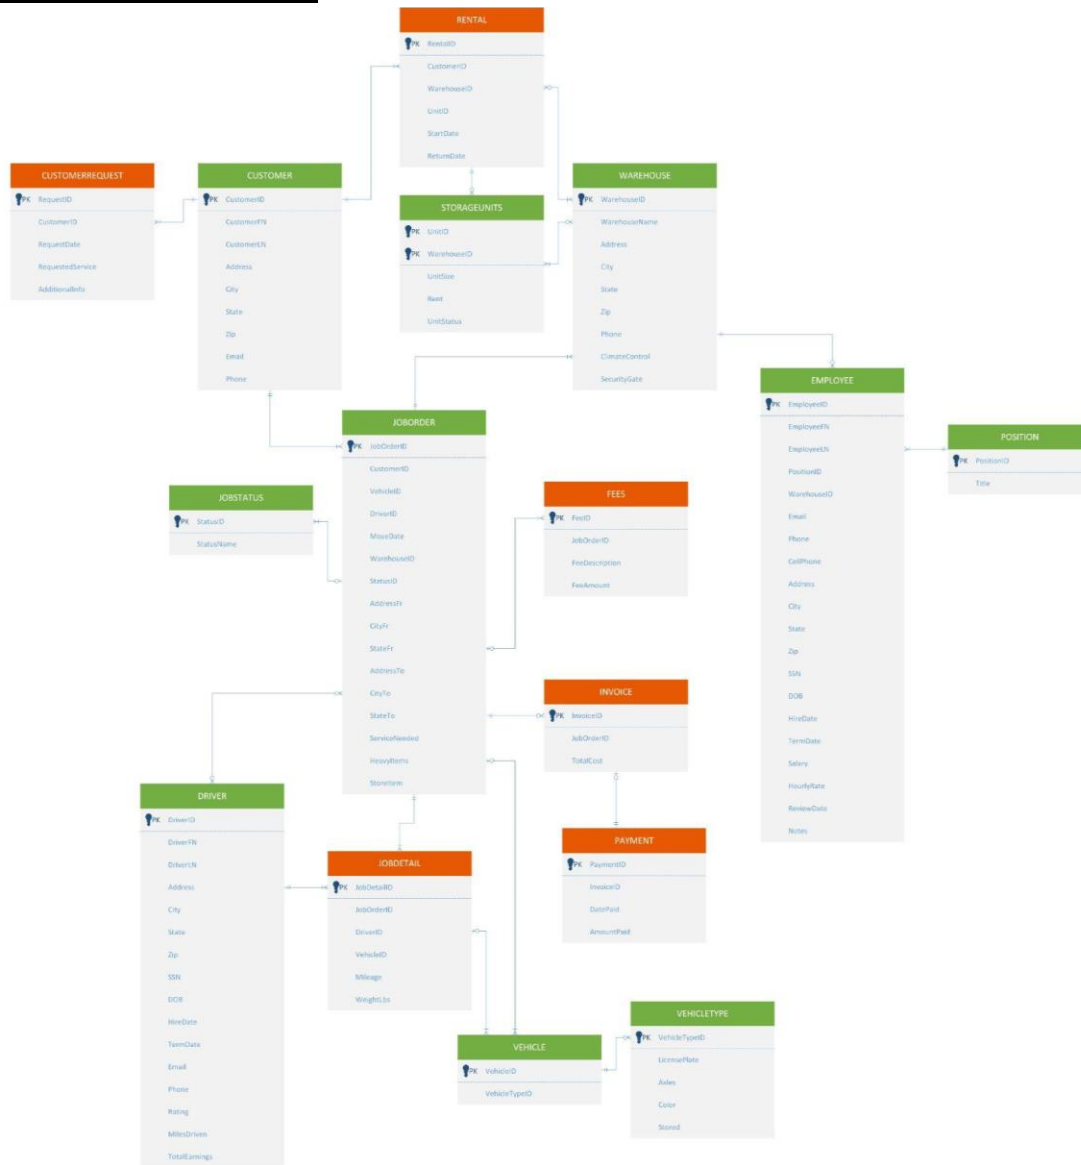

FEES(FeeID, *JobID*, FeeDescription, FeeAmount)

RENTAL(RentalID, *CustomerID*, *WarehouseID*, *UnitID*, StartDate, ReturnDate)

INVOICE(InvoiceID, *JobID*, TotalCost)

PAYMENT(PaymentID, *InvoiceID*, DatePaid, AmountPaid)

Proposed Database Design Model:

(Weak Entities in Orange; Strong Entities in Green)

Justification:

CUSTOMER and CUSTOMERREQUEST

- Minimum Cardinality: Mandatory to Mandatory
 - A customer must have a request; a request must be made by a customer
- Maximum Cardinality: One to Many
 - A customer can make many requests; a request can be made by (at most) one customer

CUSTOMER and RENTAL

- Minimum Cardinality: Mandatory to Mandatory
 - A customer must rent; a rental must be made by a customer
- Maximum Cardinality: One to Many
 - A customer can have many rentals; a rental can be made by (at most) one customer

CUSTOMER and JOBORDER

- Minimum Cardinality: Mandatory to Mandatory

- A customer must initiate for a job order; a job order must be initiated by a customer
- Maximum Cardinality: One to Many
 - A customer can initiate many job orders; a job order can be made by (at most) one customer

JOBORDER and WAREHOUSE

- Minimum Cardinality: Mandatory to Mandatory
 - A job order must be sent to a warehouse; a warehouse must receive a job order
- Maximum Cardinality: One to Many
 - A job order can be sent to only one warehouse; a warehouse can receive many job orders

JOBORDER and JOBSTATUS

- Minimum Cardinality: Optional to Mandatory
 - A job order may have a job status; a job status must correspond to a job order
- Maximum Cardinality: One to Many
 - A job order can have a job status; a job status can correspond to many job orders

JOBORDER and FEES

- Minimum Cardinality: Optional to Mandatory
 - A job order may or may not have fees; a fee must correspond to a job order
- Maximum Cardinality: One to Many
 - A job order can have many fees; a fee can correspond to (at most) one job order

JOBORDER and DRIVER

- Minimum Cardinality: Optional to Optional
 - A job order may have a driver; a driver may have a job order
- Maximum Cardinality: Many to Many
 - A job order can have many drivers assigned; a driver can be assigned to many job orders

JOBORDER and JOBDETAIL

- Minimum Cardinality: Mandatory to Mandatory
 - A job order must have details; details must correspond to a job order
- Maximum Cardinality: One to Many
 - A job order can have many details; job details can correspond to (at most) one order

JOBORDER and INVOICE

- Minimum Cardinality: Mandatory to Optional
 - A job order may have an invoice; an invoice must correspond to a job order
- Maximum Cardinality: One to Many
 - A job order can have many invoices; an invoice can correspond to (at most) one order

JOBORDER and VEHICLE

- Minimum Cardinality: Optional to Mandatory
 - A job order may be assigned to a vehicle; an vehicle must correspond to (at most) one job order
- Maximum Cardinality: One to Many
 - A job order can be assigned to many vehicles; a vehicle can correspond to (at most) one order

JOBDETAIL and VEHICLE

- Minimum Cardinality: Optional to Mandatory
 - A job detail may be associated with a vehicle; an vehicle must correspond to (at most) one job detail
- Maximum Cardinality: One to Many
 - A job detail can be associated with many vehicles; a vehicle can correspond to (at most) one job detail

WAREHOUSE and STORAGEUNITS

- Minimum Cardinality: Optional to Mandatory
 - A warehouse may have one or more storage units; a storage unit must correspond to a warehouse

- Maximum Cardinality: Many to Many
 - A warehouse can be assigned to many storage units; a storage unit can correspond to many warehouses

WAREHOUSE and EMPLOYEE

- Minimum Cardinality: Mandatory to Optional
 - A warehouse may have one or more employees; an employee must be assigned to a warehouse
- Maximum Cardinality: One to Many
 - A warehouse can have many employees; an employee can be assigned to (at most) one warehouse

RENTAL and WAREHOUSE

- Minimum Cardinality: Optional to Mandatory
 - A rental can be associated with zero or one warehouse; a warehouse must have one or more rentals
- Maximum Cardinality: Many to Many
 - A warehouse can be associated with many rentals; a rental can be associated with many warehouses

EMPLOYEE and POSITION

- Minimum Cardinality: Mandatory to Mandatory
 - An employee must have a position; a position must be assigned to an employee
- Maximum Cardinality: Many to One
 - An employee can have (at most) one position; a position can be assigned to many employees

INVOICE and PAYMENT

- Minimum Cardinality: Optional to Mandatory
 - An invoice may have a payment; payment must be in an invoice
- Maximum Cardinality: One to One
 - An invoice can have (at most) one payment; payment can be in (at most) one invoice

VEHICLE and VEHICLETYPE

- Minimum Cardinality: Mandatory to Optional
 - A vehicle must have a vehicle type; a vehicle type must be assigned to a vehicle
- Maximum Cardinality: One to Many
 - A vehicle can have (at most) one type; vehicle type can be assigned to many vehicles

Matrices/Tables:

Description: This table provides the information about positions provided in the company with the ID and position title.

POSITION		
Field	Data Type	Field Size
PositionID	Int	
Title	Char	50

Constraint: Primary Key (PositionID), Not Null (Title)

Description: This table has information of Moving On Inc.'s warehouses as it includes the ID of warehouses, warehouse names, address, phone number, and answers to whether or not they have climate control and a security gate.

WAREHOUSE		
Field	Data Type	Field Size
WarehouseID	Char	4
WarehouseName	Char	50
Address	Char	100
City	Char	50
State	Char	2
Zip	Int	
Phone	Char	14
ClimateControl	Char	3
SecurityGate	Char	3

Constraint: Primary Key (WarehouseID), Not Null (WarehouseName), Not Null (Address), Not Null (City), Not Null (State), Not Null (Zip), Not Null (Phone), Not Null (ClimateControl), Not Null (SecurityGate)

Description: This table contains information about employees of Moving On Inc., including their Employee ID, name, position, warehouse location, and email.

EMPLOYEE		
Field	Data Type	Field Size
EmployeeID	Int	
EmployeeFN	Char	50
EmployeeLN	Char	50
PositionID	Int	
WarehouseID	Char	4
Email	Char	100
Phone	Char	14
CellPhone	Char	14

Address	Char	50
City	Char	50
State	Char	2
Zip	Int	
SSN	Char	15
DOB	Date	
HireDate	Date	
TermDate	Date	
Salary	Int	
HourlyRate	Int	
ReviewDate	Date	
Notes	Char	100

Constraint: Primary Key (EmployeeID), Not Null (EmployeeFN), Not Null (EmployeeLN), Not Null (*PositionID*), Not Null (*WarehouseID*), Not Null (Email), Not Null (Phone), Not Null (CellPhone), Not Null (Address), Not Null (City), Not Null (State), Not Null (Zip), Not Null (SSN), Not Null (DOB), Not Null (HireDate)

Description: This table describes the drivers of the company with information regarding their ID, name, social security, birthday, date of when the started/ended, email, phone, ratings given by customers, amount of miles driven, and total earnings.

DRIVER		
Field	Data Type	Field Size
DriverID	Int	
DriverFN	Char	50
DriverLN	Char	50
Address	Char	50
City	Char	50
State	Char	2
Zip	Int	
SSN	Char	15

DOB	Date	
HireDate	Date	
TermDate	Date	
Email	Char	100
Phone	Char	14
Rating	Char	1
MilesDriven	Int	
TotalEarnings	Int	

Constraint: Primary Key (DriverID), Not Null (DriverFN), Not Null (DriverLN), Not Null (Address), Not Null (City), Not Null (State), Not Null (Zip), Not Null (SSN), Not Null (DOB), Not Null (HireDate), Not Null (Email), Not Null (Phone), Not Null (Rating), Not Null (MilesDriven), Not Null (TotalEarnings)

Description: This table consists of customer information including customer ID, their name, address, email, and phone number.

CUSTOMER		
Field	Data Type	Field Size
CustomerID	Int	
CustomerFN	Char	100
CustomerLN	Char	100
Address	Char	50
City	Char	50
State	Char	2
Zip	Int	
Email	Char	100
Phone	Char	14

Constraint: Primary Key (CustomerID), Not Null (CustomerFN), Not Null (CustomerLN), Not Null (Address), Not Null (City), Not Null (State), Not Null (Zip), Not Null (Email), Not Null (Phone)

Description: This table is the information of storage units including the storage unit ID, warehouse ID, size of the storage unit, amount for rent, and the status of the storage unit.

STORAGEUNITS

Field	Data Type	Field Size
UnitID	Int	
WarehouseID	Char	4
UnitSize	Char	5
Rent	Int	
UnitStatus	Char	20

Constraint: Primary Key (UnitID), Not Null (*WarehouseID*), Not Null (*UnitSize*), Not Null (*Rent*), Not Null (*UnitStatus*)

Description: This table details the requests made by customers with the request ID, customer ID, date for when the request was made, the requested service, and any additional information.

CUSTOMERREQUEST		
Field	Data Type	Field Size
RequestID	Char	<u>8</u>
CustomerID	Int	
RequestDate	Date	
RequestedService	Char	50
AdditionalInfo	Char	50

Constraint: Primary Key (RequestID), Not Null (*CustomerID*), Not Null (*RequestDate*), Not Null (*RequestedService*), Not Null (*AdditionalInfo*)

Description: This detail has information of the types of vehicles including the vehicle type number, license plate, number of axles, color of the car, and answers if the vehicle is stored.

VEHICLETYPE		
Field	Data Type	Field Size
VehicleTypeID	Int	
LicensePlate	Char	8
Axles	Int	
Color	Char	20
Stored	Char	3

Constraint: Primary Key (VehicleTypeID), Not Null (LicensePlate), Not Null (Axles), Not Null (Color), Not Null (Stored)

Description: This table has information of the vehicles with the vehicle ID and vehicle type ID.

VEHICLE		
Field	Data Type	Field Size
VehicleID	Int	
VehicleTypeID	Int	

Constraint: Primary Key (VehicleID), Not Null (*VehicleTypeID*)

Description: This table has information of the job order with the job order ID, customer ID, vehicle ID, driver ID, date of moving, warehouse ID, status information, address of start location and new location, and answers service needed/heavy items/stored items.

JOBORDER		
Field	Data Type	Field Size
JobOrderID	Char	8
CustomerID	Int	
VehicleID	Char	8
DriverID	Int	
MoveDate	Date	
WarehouseID	Char	4
StatusID	Int	
AddressFr	Char	50
CityFr	Char	50
StateFr	Char	2
AddressTo	Char	50
CityTo	Char	50
StateTo	Char	2
ServiceNeeded	Char	20

HeavyItems	Char	3
StoreItem	Char	3

Constraint: Primary Key (*JobOrderID*), Not Null (*CustomerID*), Not Null (*VehicleID*), Not Null (*DriverID*), Not Null (*MoveDate*), Not Null (*WarehouseID*), Not Null (*StatusID*), Not Null (*AddressFr*), Not Null (*CityFr*), Not Null (*StateFr*), Not Null (*AddressTo*), Not Null (*CityTo*), Not Null (*StateTo*), Not Null (*ServiceNeeded*), Not Null (*HeavyItems*), Not Null (*StoreItem*)

Description: This table gives details of the job order including the detail ID, job order ID, driver ID, vehicle ID, mileage, and weight of things being moved.

JOBDETAIL		
Field	Data Type	Field Size
JobDetailID	Char	7
JobOrderID	Char	8
DriverID	Int	
VehicleID	Char	8
Mileage	Int	
WeightLbs	Int	

Constraint: Primary Key (*JobDetailID*), Not Null (*JobOrderID*), Not Null (*DriverID*), Not Null (*VehicleID*), Not Null (*Mileage*), Not Null (*Weight*)

Description: This table provides the status information of a job order with a status ID, and name of the status.

JOBSTATUS		
Field	Data Type	Field Size
StatusID	Int	
StatusName	Char	20

Constraint: Primary Key (*StatusID*), Not Null (*StatusName*)

Description: This table provides information about the fees for job order including the fee ID, job order ID, description of the fee, and fee amount. It is useful for calculating and tracking costs of job orders, providing customers with invoices.

FEES		
Field	Data Type	Field Size

FeeID	Char	8
JobOrderID	Char	8
FeeDescription	Char	50
FeeAmount	Int	

Constraint: Primary Key (FeeID), Not Null (*JobID*), Not Null (*FeeDescription*), Not Null (*FeeAmount*)

Description: This table gives information of the rentals with the rental ID, customer ID, warehouse ID, and the rental start/end date.

RENTAL		
Field	Data Type	Field Size
RentalID	Char	8
CustomerID	Int	
WarehouseID	Char	4
UnitID	Int	
StartDate	Date	
ReturnDate	Date	

Constraint: Primary Key (RentalID), Not Null (*CustomerID*), Not Null (*WarehouseID*), Not Null (*UnitID*), Not Null (*StartDate*)

Description: This table has information regarding invoices of customers which includes the invoice ID, job order ID, and total cost. This is useful for customers to track what is being billed to them.

INVOICE		
Field	Data Type	Field Size
InvoiceID	Char	7
JobOrderID	Char	8
TotalCost	Int	

Constraint: Primary Key (InvoiceID), Not Null (*JobID*), Not Null (*TotalCost*)

Description: This table consists of information of all the payments made by customers with payment ID, invoice ID, the date paid, and amount paid. This is for the company to keep track of who paid, who still owes, etc.

PAYMENT		
Field	Data Type	Field Size
PaymentID	Char	6
InvoiceID	Char	7
DatePaid	Date	
AmountPaid	Int	

Constraint: Primary Key (PaymentID), Not Null (*InvoiceID*), Not Null (*DatePaid*), Not Null (*AmountPaid*)

SQL Queries w/ Screenshots:

- List the balance due to MovinOn from each customer inclusive of moving jobs and rentals for a specific month.

SQLQuery111.sql - MSLSMOVINGONINC (MS\TARRO (61)) - Microsoft SQL Server Management Studio

File Edit View Query Project Tools Window Help

SQLQuery111.sql - MSLSMOVINGONINC (MS\TARRO (61))

Object Explorer

Results Messages

```

SELECT C.CustomerID, C.CustomerFN, C.CustomerLN, SUM(P.AmountPaid) AS BalanceDue
FROM CUSTOMER C, PAYMENT P, RENTAL R
WHERE C.CustomerID = P.PaymentID
AND P.PaymentID = R.RentalID
AND R.StartDate >= '2017-08-12'
AND R.ReturnDate < '2022-11-08'
GROUP BY C.CustomerID, C.CustomerFN, C.CustomerLN

```

Query executed successfully. MSI (15.0 RTM) MS\TARRO (61) MOVINGONINC 00:00:00 0 rows

- List the amount due to each driver for moving jobs conducted in a specific month.

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'MSI (SQL Server 15.0.2000.5)'. The query window in the center contains the following SQL code:

```

SELECT D.DriverID, D.DriverFN, D.DriverLN,
SUM(CASE
WHEN D.Rating = 'A' THEN F.FeeAmount * 0.95
WHEN D.Rating = 'B' THEN F.FeeAmount * 0.90
ELSE F.FeeAmount * 0.85
END) AS Payment
FROM DRIVER D, FEES F, JOBORORDER J
WHERE D.DriverID = J.DriverID
AND MONTH(J.MoveDate) = 5
GROUP BY D.DriverID, D.DriverFN, D.DriverLN;

```

The Results pane at the bottom shows a single row of data:

DriverID	DriverFN	DriverLN	Payment
1	203	Ashley Lee	2384.10

The status bar at the bottom indicates 'Query executed successfully.' and 'MSI (15.0 RTM) MSI(tarro (55)) MOVINGONINC 00:00:00 1 rows'.

- List the drivers and their corresponding job details

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'MSI (SQL Server 15.0.2000.5)'. The query window in the center contains the following SQL code:

```

SELECT D.DriverID, D.DriverFN, D.DriverLN, JO.JobOrderID, JO.MoveDate, P.PositionID, F.FeeAmount, F.WeightLbs, F.CustomerID
FROM DRIVER D, JOBORORDER JO, JOBDETAIL J, POSITION P, FEES F
WHERE D.DriverID = J.DriverID
AND JO.JobOrderID = J.JobOrderID;

```

The Results pane at the bottom shows a large table of data with the following columns: DriverID, DriverFN, DriverLN, JobOrderID, MoveDate, PositionID, Mileage, WeightLbs, FeeAmount, and CustomerID. The table contains 79 rows of data, starting with DriverID 70 and ending with DriverID 79.

The status bar at the bottom indicates 'Query executed successfully.' and 'MSI (15.0 RTM) MSI(tarro (57)) MOVINGONINC 00:00:04 79,375 rows'.

- List the revenues for MovinOn in a particular month once drivers and employees have been paid out. Revenues should include both moving jobs and rentals.

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left shows the database structure for 'MSI (SQL Server 15.0.2000.5)'. The query editor in the center contains the following SQL query:

```
SELECT
    J.WarehouseID,
    SUM(F.FeeAmount) AS Fees,
    SUM(
        CASE
            WHEN R.RentalID IS NOT NULL THEN su.Rent
            WHEN J.ServiceNeeded = 'Moving' THEN J.HeavyItems * 50
            ELSE 0
        END
    ) AS Revenues
FROM
    JOBBORDER J
JOIN JOBDDETAIL jd ON J.JobOrderID = JD.JobOrderID
JOIN FEES F ON J.JobOrderID = F.JobOrderID
JOIN RENTAL R ON J.WarehouseID = R.WarehouseID AND J.CustomerID = R.CustomerID
JOIN STORAGEUNITS su ON R.UnitID = su.UnitID
GROUP BY
    J.WarehouseID;
```

The Results pane at the bottom shows the following data:

	WarehouseID	Fees	Revenues
1	AZ-1	816	625
2	CA-1	4900	625
3	NV-1	2631	625

- List the storage units that have not been leased and are available.

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left shows the database structure for 'MSI (SQL Server 15.0.2000.5)'. The query editor in the center contains the following SQL query:

```
SELECT UnitID, UnitSize
FROM STORAGEUNITS
WHERE UnitID NOT IN (SELECT DISTINCT UnitID FROM RENTAL);
```

The Results pane at the bottom shows the following data:

	UnitID	UnitSize
1	6	12x12
2	6	8x12
3	6	12x12
4	7	12x12
5	7	8x10
6	7	12x10
7	8	15x15

Questions:

- **Why is normalization important when defining a database design?**
 - Normalization is important when defining a database design because it improves the accuracy and performance of the data. There are often data redundancies and inconsistencies that normalization helps remove. The process helps with keeping the data organized in general—keeping the data store efficiently and effectively.
- **How do you validate a proposed database design model before implementation?**
 - To validate a proposed database design model before implementation you would need to carefully review and analyze the model not just by yourself but through communicating with stakeholders to gather feedback. Some methods to validate include checking the requirements of the model, creating the actual model, using normalization, checking with stakeholders, and creating a test version. For any project, it is important to check the requirements, so doing so for validation of a database design model is necessary as well. Some of the requirements to look out for in a model would be looking into key entities and relationships. To create a data model, you may use a diagramming tool like the ERD's we use through Microsoft Visio to represent the database you plan on working with. Since normalization helps improve accuracy of the data it would be necessary to incorporate as validation. Then, reviewing with stakeholders is helpful after the design model is made so you are made aware of the requirements being met or not. Lastly, to fully validate the design, creating a test version of the database is helpful to see if there are any errors or flaws in your design.
- **What challenges did you face during this database course?**
 - I struggled a lot with writing SQL queries. Starting off this class as a Kinesiology student with no prior experience to SQL—I definitely struggled a lot. I found it very difficult and challenging when creating the syntax to insert data sometimes. Sometimes I would be seeing the errors pop up and fully thinking I did nothing wrong and executing for a very long time only to find the simplest of mistakes like forgetting to add a parentheses or semicolon.
- **What would be your advice to future ISDS 402 students?**
 - My advice to future ISDS 402 students is to be patient and not to be so hard on yourself. Throughout this course, I found myself frustrated with my own abilities and thinking I could never understand anything. However, through time and thanks to the guidance of my group who would give me some pointers/tips when we would work on the group projects—I have been able to adapt and understand more!
